

STE designs possibilities everyday for clients located nearby or around the world—clients who expect advanced engineering and safety knowledge to solve their design challenges and to provide practical ways to apply innovative solutions.

Utilizing advanced design technology, you will quickly see how our team’s solutions

generate on-target responses for your projects. From aviation to zoos, STE, Inc. provides services that add value to a project’s design, construction and maintenance activities at a much quicker pace. From start to finish, STE works with your team to implement Sustainable Safety® so its impact is realized from the initial design concepts to the construction of a project and on into the operation/maintenance of a facility or attraction.

We continue to make history by expanding traditional engineering to include safety and training via high level information, technology and practices. Fueled by a forward thinking team, STE serves a global client base with advanced solutions to *engineering, safety, and training*. At STE, we incorporate new concepts and technology throughout our projects. Our reputation of providing specialty applications to traditional design is well known and evidenced by invitations to present at national conferences, author professional publications and produce team training events.

SUSTAINABLE SAFETY® CERTIFICATION

OSHA Fatal Facts notes lack of training is the most commonly cited cause of fall injuries and fatalities. The Sustainable Safety® Certification utilizes the Managed Fall Protection approach and will maximize your fall protection efforts with clearly defined and outlined information. Our training programs incorporate the

ANSI Z359 Managed Fall Protection Program Standard, ASTM Standards, OSHA Regulations, Industry Best Safety Practices and your in-house Managed Fall Protection Program (MFPP) requirements. In addition, our training programs include the expanded roles and responsibilities of your fall protection team, along with rescue; equipment selection, use, and maintenance; and other related issues impacting employees' safety while performing work-at-height activities.

As your Qualified Person in fall protection, we provide training to advance your team's fall protection approach. We teach teams how to address their existing fall protection hazards *and*, also, how to prevent buying and/or creating new hazards via your facilities, rides, processes or machines. Our certification is geared to engage students in the learning process with discussion, coaching, hands-on demonstrations and practice. With over 500 million sq ft of fall protection and facility design projects, our team knows how to relate the requirements to a student's work environment to make it relevant and useful. You will become proficient in addressing issues that relate to work-at-height activities in order to reduce injuries or fatalities. We help teams build safety competencies that aid them to safely and confidently perform their work activities.

OPEN ENROLMENT AND RATES

2010 Training Schedule

Sep 20–24

2011 Training Schedule

Jan 17–21

May 16–20

Sustainable Safety® Certification MFPP Roles

Authorized Person	\$ 650	12 hours
Competent Person	\$1,295	32 hours
Program Administrator	\$2,300	40 hours
Qualified Person	\$2,300	40 hours
Competent Trainer	\$3,000	40 hours

* Custom training also available upon request.
