

AWARENESS - 4 hrs

We recommend that prior to training that key persons involved with the Fall Protection Program attend Awareness Training

There are inter-disciplinary issues related to the elimination or control of fall hazards. Experience shows that it is important to introduce the elements and value of a managed fall protection approach to a team that represents the multiple work activities of the company so that all components of the facility are considered. This 4-hour introductory course does not require previous fall protection knowledge or experience.

Who Should Attend?

- Members of your management team, purchasing, legal, safety, engineers, architects, maintenance, production, construction and rescue
- Skilled Trades
- Program Administrator
- Fall Protection Committee
- Supervisors of Crew and Foremen
- Competent Person Candidates
