

COMPETENT PERSON- 40 hrs

Designed for safety personnel, managers, facility engineers, maintenance foremen and supervisors and construction foremen and supervisors, this 40 hour course instructs students on their roles and responsibilities as the Competent Person. Students will learn how to effectively control fall hazards in their workplace and to make proper and adequate fall protection decisions based on industry best safe practices. Course includes: job hazard analysis, Hierarchy of Fall Prevention, anchorage verification, clear height and swing fall calculations, fall protection equipment use, inspection, storage and maintenance, horizontal lifelines, rescue methods, and restraint/travel restraint work positioning. We provide the most advanced level of fall protection knowledge, with a curriculum based on OSHA regulations, letters of interpretation and directives; ANSI standards and the best safe practices for engineering, safety, construction fall protection and rescue.
