

## **PROGRAM ADMINISTRATOR – 32 hrs**

*In keeping in compliance with PROPOSED ANSI Z359.1, we recommend that a Program Administrator is designated before the training begins, since their responsibilities include managing the implementation of the fall protection program.*

A new role in a managed fall protection approach, this course trains individuals authorized by their employer as being responsible for managing the company's fall protection program. The program administrator is trained to the level of competent person and is responsible for the entire fall protection program: committees, hazard control, policy and procedures, program changes and determining program effectiveness. The program administrator is also responsible for the training programs, rescue plans and procedures and has control over the purchase of fall protection equipment types.
